RAINFOREST ALLIANCE GUIDANCE
Empty pesticide container disposal in Vietnam
Version 1
The Rainforest Alliance is creating a more sustainable world by using social and market forces to protect nature and improve the lives of farmers and forest communities.

Annex 1 List of companies licensed to handle hazardous waste ..................................................9
OBJECTIVE

This document is intended to help (groups of) farms seeking Rainforest Alliances certification and Rainforest Alliance certified farms understand and implement an empty pesticide container handling, collection, and disposal system in Vietnam.

SCOPE

This document covers requirement 4.6.9 of the 2020 Rainforest Alliance Sustainable Agriculture Standard 1.1 for the geographical scope of Vietnam.

AUDIENCE

This document is intended for Certificate Holders and farms seeking certification in Vietnam.

GUIDANCE

What does the requirement say?

<table>
<thead>
<tr>
<th>4.6.9</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empty <strong>pesticides</strong> containers and application equipment are washed three times, and rinsing water is used in the last batch of the mix to apply to the crop. After application of pesticides, application equipment is washed three times, and the surplus mix is disposed of in a way that minimizes the negative impact on the environment and human health, by diluting it with ten times the amount of clean water and applied evenly on the field that was subject of the pesticide application.</td>
</tr>
<tr>
<td>The empty pesticide containers are kept in a locked storage area until safely disposed of through a formal collection, and recycling program or returned to the supplier. If the supplier does not accept empty containers, they are cut or perforated to prevent other uses.</td>
</tr>
<tr>
<td>Prohibited, <strong>obsolete</strong> and expired pesticides are returned to the supplier or local authority. In absence of a collection system in place, these products are labelled and stored safely and separately from other products in a locked space.</td>
</tr>
</tbody>
</table>
What does the implementation guide say?

<table>
<thead>
<tr>
<th>4.6.9</th>
<th>EMPTY PESTICIDES CONTAINERS</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Purpose</strong></td>
<td>Ensure that empty pesticide containers are disposed of safely, and that prohibited, obsolete, and expired pesticides are managed safely to avoid negative impacts on the environment and human health.</td>
</tr>
</tbody>
</table>

**Implementation guidance**

- CH manages the empty pesticide containers as follows:
  - Wash the containers and application equipment 3 times.
  - Use the surplus mix, diluted with 10 times the amount of clean water, and apply evenly on the field subject to the pesticide application.
  - Keep pesticide containers in a locked storage area until safely disposed of through a formal collection and recycling program, or return the containers to the supplier if they accept the containers.

This also applies to prohibited, obsolete, and expired pesticides.

- When no formal collection or recycling system is available, the containers are cut or perforated to prevent other uses.

- After containers have been cut or perforated, they can be brought to specific landfill sandpits, or destroyed using high-temperature incineration according to what is allowed under national legislation. These can be government licensed incinerators.

For groups, it is recommended to establish a collection system for all group members to properly dispose of pesticide containers.

For large farms, it is recommended to discuss with the agrochemical dealers and sector platforms to share responsibility on how to dispose of containers, based on the mutual benefit for the business. Another recommendation is to check if suppliers may support the collection of containers when products are purchased from them.

What does Vietnamese law say?

In Vietnam the Law On Environmental Protection No. 55/2014/QH13 dated June 23, 2014 defines hazardous waste in the following way:
**Hazardous waste (HW)**
Refers to the waste that exhibits one or more hazardous traits such as toxicity, reactivity, infectivity, ignitability, corrosivity, or other poisonous characteristics. This includes HW from agriculture production including pesticides, preservatives, herbicides etc., that contains heavy metals or other hazardous substances harmful to the environment.

**Hazardous Waste Management (HWM)**
Refers to the process of prevention, control, minimization, monitoring, classification, collection, transportation, reuse, recycling, and disposal of waste.

In relation to the classification, collection, and storage of hazardous wastes prior to processing Article 91. of the Law On Environmental Protection No. 55/2014/QH13 says:

1. Every entity that discharges hazardous wastes must collect, store, and process hazardous wastes in accordance with environmental standards; if the entity that discharges hazardous wastes fails to process hazardous wastes in accordance with environmental standards, hazardous wastes shall be transferred to an entity licensed to process hazardous wastes.
2. Hazardous wastes must be kept in specialized containers that ensure no negative impacts on humans and the environment.

**Responsible parties in HWM**
The Law on Environmental Protection also describes roles and responsibilities of actors involved in the processes in the following ways:

**Pesticides users (in the Rainforest Alliance context: farmers, group members, workers):**
- Collect empty pesticide containers (EPCs) and put into storage tanks;
- Keep the pesticide packages for use separately from other kinds of waste;
- Not use EPCs for other purposes;
- Not burn or bury EPCs after use.

**Companies (in the Rainforest Alliance context: farm/group management at Certificate Holder level):** directly investing in the agricultural and forestry activities generating EPCs:
- Organize the collection of their EPCs;
- Contract licensed company (service provider) for hazardous waste transport and treatment;
- Undertake the responsibilities of the waste generator as stipulated under Circular No. 36/2015/TT-BTNMT;
- Bear the costs for the construction of tanks, collection, transportation and treatment of EPC.

The diagram below shows the flow of responsibilities for the disposal of empty pesticide containers from the users (at the bottom) to the company and licensed service providers (at the top).
A list of companies licensed by the government to handle hazardous waste can be found in annex 1. These companies can also arrange licensed transport of hazardous waste.
Bins
EPC bins can have many shapes or forms, see figure 2 for examples. Any type of locked storage is acceptable, including storage rooms. What is important is that only trained handlers have access to the EPCs.

![Figure 2 Example of EPC collection bins](image)

Summary
Certificate holders have to make sure that there are:
1. EPC bins or storage (locked and accessible only to trained handlers)
2. Group members/workers are instructed on location and use of bins/storage
3. Group members/workers are inspected on the use of bins/storage. Certificate holders are encouraged to develop a reward/sanction system for group members
4. Contracts with licensed waste handlers to periodically collect EPCs
# ANNEX 1 LIST OF COMPANIES LICENSED TO HANDLE HAZARDOUS WASTE

LIST OF COMPANIES AND ENTERPRISES THAT ARE GRANTED PERMISSION BY VIETNAM ENVIRONMENT ADMINISTRATION TO DISPOSE OF HAZARDOUS WASTE ACCORDING TO CIRCULAR NO. 12/2011/TT-BTNMT, THE MINISTRY OF NATURAL RESOURCES AND ENVIRONMENT ISSUES PERMISSION ACCORDING TO CIRCULAR 36/2015/TT-BTNMT (Updated On 21/5/2018)
